Introduction to OpenID Connect

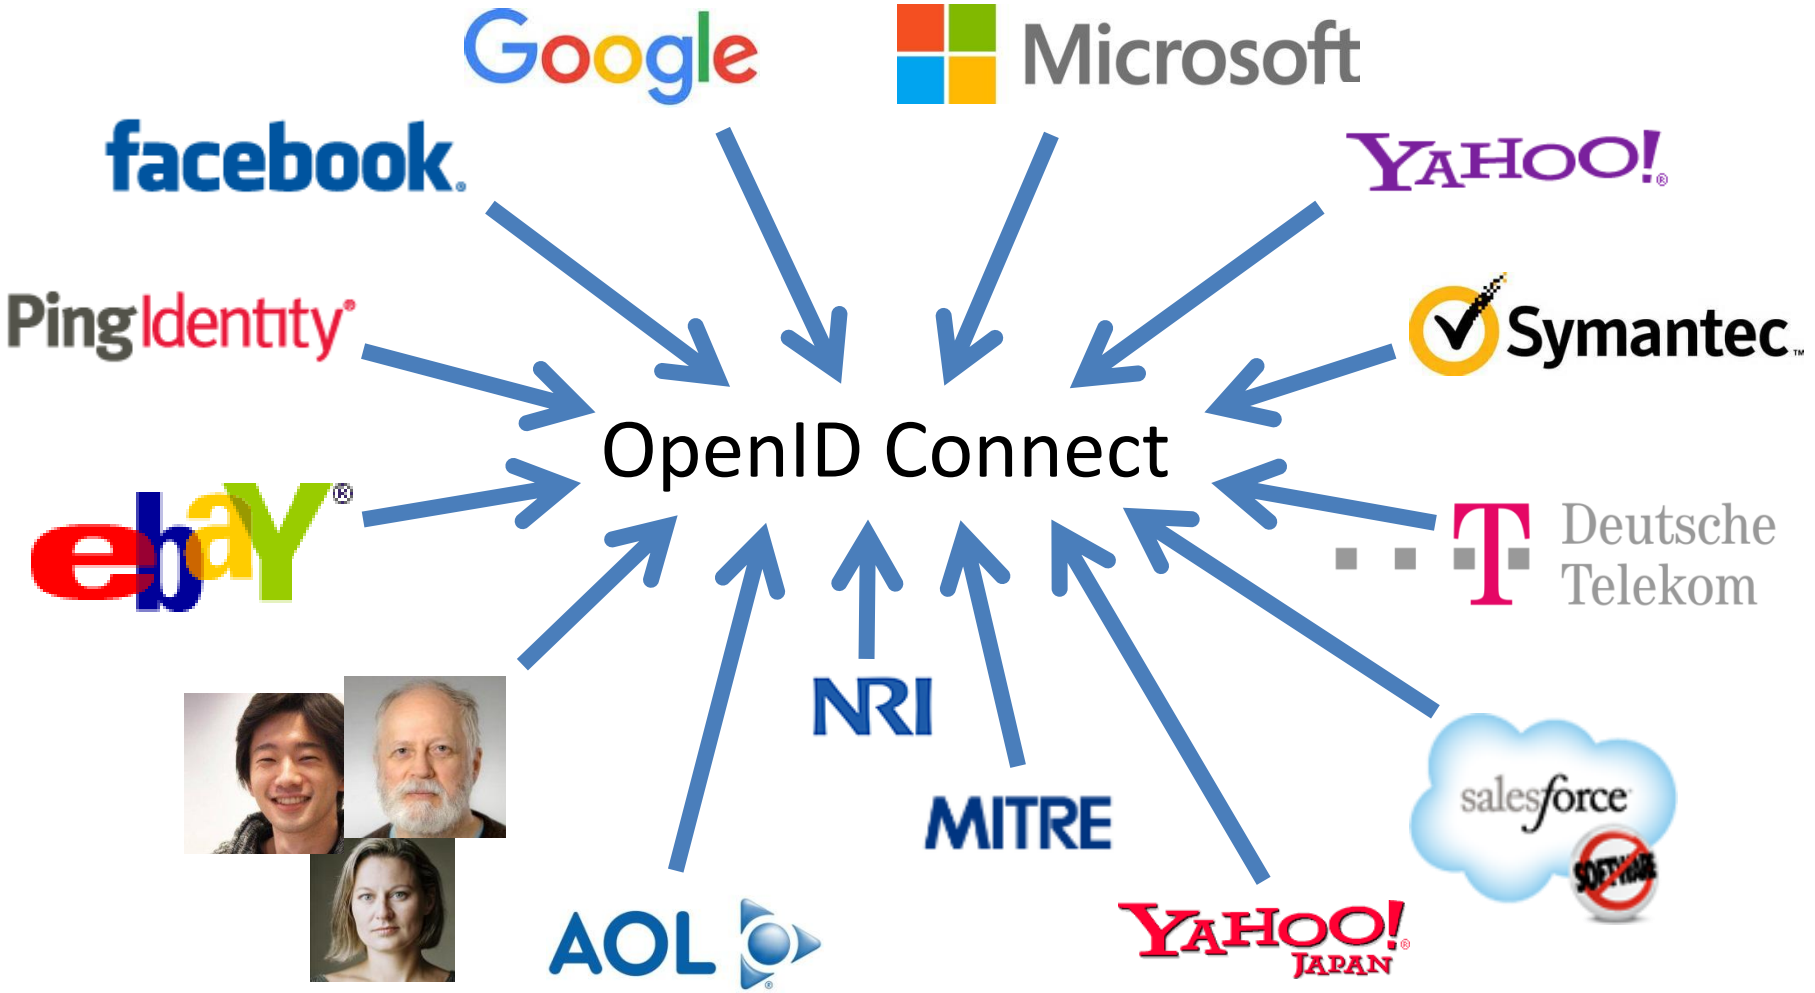
October 21, 2025

Michael B. Jones

Self-Issued Consulting

Working Together

OpenID



What is OpenID Connect?

- Simple identity layer on top of OAuth 2.0
- Enables Relying Parties (RPs) to verify identity of end-user
- Enables RPs to obtain basic profile info
- REST/JSON interfaces → low barrier to entry
- Described at https://openid.net/connect/

You're Almost Certainly Using OpenID Connect!

- Android, AOL, Apple, AT&T, Auth0, Deutsche Telekom, ForgeRock, Google, GrabTaxi, GSMA Mobile Connect, IBM, KDDI, Microsoft, NEC, NRI, NTT, Okta, Oracle, Orange, Ping Identity, Red Hat, Salesforce, Softbank, Symantec, Telefónica, Verizon, Yahoo, Yahoo! Japan, all use OpenID Connect
  - Many other sites and apps large and small use OpenID Connect
- OpenID Connect is infrastructure
  - Not a consumer brand

OpenID Connect Range

- Spans use cases, scenarios
  - Internet, Enterprise, Mobile, Cloud, Federated, User-Centric
- Spans security & privacy requirements
  - From non-sensitive information to highly secure
- Spans sophistication of claims usage
  - From basic default claims to specific requested claims to collecting claims in multiple formats from multiple sources
- Maximizes simplicity of implementations
  - Uses existing IETF specs: OAuth 2.0, JSON Web Token (JWT), etc.
  - Lets you build only the pieces you need

Numerous Awards

- OpenID Connect won 2012 European Identity Award for Best Innovation/New Standard
  - https://openid.net/2012/04/18/openid-connect-wins-2012-european-identity-and-cloud-award/
- OAuth 2.0 won in 2013
- JSON Web Token (JWT) & JOSE won in 2014
- OpenID Certification program won 2018 Identity Innovation Award
- OpenID Certification program won 2018 European Identity Award

Presentation Overview

- Introduction
- Design Philosophy
- Timeline
- A Look Under the Covers
- Overview of OpenID Connect Specs
- More OpenID Connect Specs
- OpenID Certification
- Resources

Design Philosophy

OpenID

Keep Simple Things Simple

Make Complex Things Possible

Keep Simple Things Simple

UserInfo Endpoint for simple claims about user

Designed to work well on mobile phones

How We Made It Simple

- Built on OAuth 2.0
- Uses JavaScript Object Notation (JSON)
- Lets you build only the pieces that you need

- *Goal: Easy implementation on all modern development platforms*

Make Complex Things Possible

- Encrypted Claims
- Aggregated Claims
- Distributed Claims

Key Differences from OpenID 2.0

- Support for native client applications
- Identifiers using e-mail address format
- UserInfo Endpoint for simple claims about user
- Designed to work well on mobile phones
- Uses JSON/REST, rather than XML
- Support for encryption and higher LOAs
- Support for distributed and aggregated claims
- Support for session management, including logout
- Support for self-issued identity providers

OpenID Connect Timeline

- Artifact Binding working group formed, March 2010
- Major design issues closed at IIW, May 2011
  - Result branded “OpenID Connect”
- 5 rounds of interop testing between 2011 and 2013
  - Specifications refined after each round of interop testing
- Won Best New Standard award at EIC, April 2012
- **Final specifications approved, February 2014**
- Errata Set 1 approved, November 2014
- OpenID Connect Certification launched, April 2015
- OpenID Federation work begun, July 2016
- OpenID Certification program won awards in March 2018 and April 2018
- Logout specifications became Final, September 2022
- Numerous extension specs under way, including for Verifiable Credentials, 2019-present
- Errata Set 2 approved, December 2023
- **OpenID Connect specs published as ISO PAS specifications, October 2024**
- Errata Set 3 draft published in January 2025 with audience value security fix

A Look Under the Covers

- ID Token
- Claims Requests
- UserInfo Claims
- Example Protocol Messages

ID Token

- JSON Web Token (JWT) representing logged-in session
- Claims:
  - `iss` – Issuer
  - `sub` – Identifier for subject (user)
  - `aud` – Audience for ID Token
  - `iat` – Time token was issued
  - `exp` – Expiration time
  - `nonce` – Mitigates replay attacks

ID Token Claims Example

```
{
 "iss": "https://server.example.com",
 "sub": "248289761001",
 "aud": "0acf77d4-b486-4c99-bd76-074ed6a64ddf",
 "iat": 1311280970,
 "exp": 1311281970,
 "nonce": "n-0S6_WzA2Mj"
}
```

Claims Requests

- Basic requests made using OAuth scopes:
  - `openid` – Declares request is for OpenID Connect
  - `profile` – Requests default profile info
  - `email` – Requests email address & verification status
  - `address` – Requests postal address
  - `phone` – Requests phone number & verification status
  - `offline_access` – Requests Refresh Token issuance
- Requests for individual claims can be made using JSON "`claims`" request parameter

UserInfo Claims

- sub
- name
- given_name
- family_name
- middle_name
- nickname
- preferred_username
- profile
- picture
- website
- gender
- birthdate
- locale
- zoneinfo
- updated_at
- email
- email_verified
- phone_number
- phone_number_verified
- address

UserInfo Response Example

```
{
 "sub": "248289761001",
 "name": "Jane Doe",
 "given_name": "Jane",
 "family_name": "Doe",
 "email": "janedoe@example.com",
 "email_verified": true,
 "picture": "https://example.com/janedoe/me.jpg"
}
```

Authorization Request Example

```
https://server.example.com/authorize
 ?response_type=id_token%20token
 &client_id=0acf77d4-b486-4c99-bd76-074ed6a64ddf
 &redirect_uri=https%3A%2F%2Fclient.example.com%2Fcb
 &scope=openid%20profile
 &state=af0ifjsldkj
 &nonce=n-0S6_WzA2Mj
```

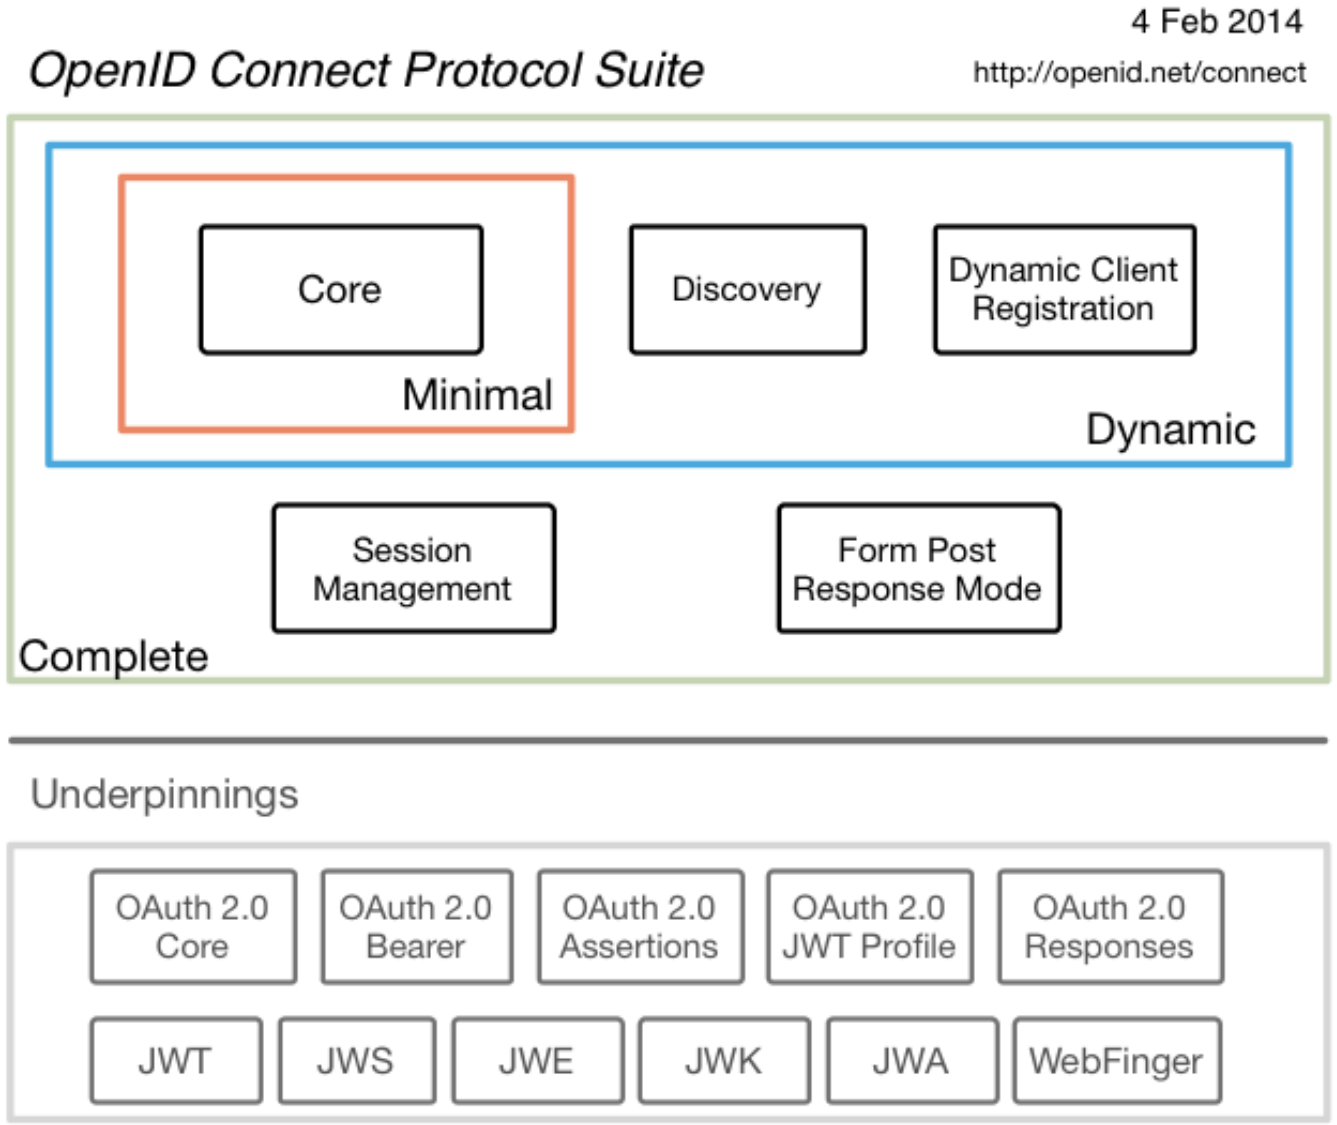
Authorization Response Example

```
HTTP/1.1 302 Found
Location: https://client.example.com/cb
 #access_token=mF_9.B5f-4.1JqM
 &token_type=bearer
 &id_token=eyJhbGzI1NiJ9.eyJz9Glnw9J.F9-V4IvQ0Z
 &expires_in=3600
 &state=af0ifjsldkj
```

UserInfo Request Example

```
GET /userinfo HTTP/1.1
Host: server.example.com
Authorization: Bearer mF_9.B5f-4.1JqM
```

Original Overview of Specifications



Celebrating Ten Years of OpenID Connect

- OpenID Connect specifications were approved in February 2014
- Three celebrations were held
  - January 2024 at Japan OpenID Summit in Tokyo
  - May 2024 at Identiverse in Las Vegas
  - June 2024 at EIC in Berlin
- Presentations from first celebration published at https://self-issued.info/?p=2481
- During the celebrations, we are shared our perspectives on
  - How we developed OpenID Connect
  - Why it succeeded
  - Lessons we learned along the way
- Lessons learned
  - “Keep simple things simple”
  - Repeated interop testing and incorporating resulting feedback from developers was critical
  - Certification enables an ecosystem of interoperable implementations

OpenID 2.0 to OpenID Connect Migration

- Defines how to migrate from OpenID 2.0 to OpenID Connect
  - Has OpenID Connect identity provider also return OpenID 2.0 identifier, enabling account migration
- https://openid.net/specs/openid-connect-migration-1_0.html
- *Completed April 2015*
- Google shut down OpenID 2.0 support in April 2015
- AOL, Yahoo, others have replaced OpenID 2.0 with OpenID Connect

OAuth 2.0 Form Post Response Mode

- Defines how to return OAuth 2.0 Authorization Response parameters (including OpenID Connect Authentication Response parameters) using HTML form values auto-submitted by the User Agent using HTTP POST
- A “form post” binding, like SAML and WS-Federation
  - An alternative to fragment encoding
- https://openid.net/specs/oauth-v2-form-post-response-mode-1_0.html
- *Completed April 2015*
- In production use by Microsoft, Ping Identity, others

RP-Initiated Logout

- Enables RP to request that OP log out end-user
  - https://openid.net/specs/openid-connect-rpinitiated-1_0.html
  - Content recently split out of Session Management spec
- Can be used with all OP-Initiated Logout methods
- Not affected by browser privacy changes
  - (unlike some of the OP-Initiated Logout methods)
- *Final Specification as of September 2022*

OP-Initiated Logout

- Enables OP to request that RPs log out end-user's sessions with the OP
- Three approaches specified by the working group:
  - Session Management
    - https://openid.net/specs/openid-connect-session-1_0.html
    - Uses HTML5 postMessage to communicate state changes between OP and RP iframes
  - Front-Channel Logout
    - https://openid.net/specs/openid-connect-frontchannel-1_0.html
    - Uses HTTP GET to load image or iframe, triggering logout (similar to SAML, WS-Federation)
  - Back-Channel Logout
    - https://openid.net/specs/openid-connect-backchannel-1_0.html
    - Server-to-communication not using the browser (so can be used by native applications)
- All support multiple logged-in sessions from OP at RP
- Session Management & Front-Channel Logout affected by browser privacy changes
- *Final Specifications as of September 2022*

`unmet_authentication_requirements` Specification

- OpenID Connect Core Error Code unmet_authentication_requirements
  - https://openid.net/specs/openid-connect-unmet-authentication-requirements-1_0.html
- Defines `unmet_authentication_requirements` error code
- Enables OP to signal that it failed to authenticate the End-User per the RP's requirements

- *Became Final in November 2022*

`prompt=create` Specification

- Initiating User Registration via OpenID Connect specification
  - https://openid.net/specs/openid-connect-prompt-create-1_0.html
- Requests enabling account creation during authentication

- *Became Final in December 2022*

OpenID Connect ISO Specifications

- OpenID Connect specifications published as ISO PAS specs, October 2024
- Enables use of OpenID Connect in jurisdictions requiring specs by treaty organizations

  - ISO/IEC 26131:2024 — Information technology — OpenID connect — OpenID connect core 1.0 incorporating errata set 2
  - ISO/IEC 26132:2024 — Information technology — OpenID connect — OpenID connect discovery 1.0 incorporating errata set 2
  - ISO/IEC 26133:2024 — Information technology — OpenID connect — OpenID connect dynamic client registration 1.0 incorporating errata set 2
  - ISO/IEC 26134:2024 — Information technology — OpenID connect — OpenID connect RP-initiated logout 1.0
  - ISO/IEC 26135:2024 — Information technology — OpenID connect — OpenID connect session management 1.0
  - ISO/IEC 26136:2024 — Information technology — OpenID connect — OpenID connect front-channel logout 1.0
  - ISO/IEC 26137:2024 — Information technology — OpenID connect — OpenID connect back-channel logout 1.0 incorporating errata set 1
  - ISO/IEC 26138:2024 — Information technology — OpenID connect — OAuth 2.0 multiple response type encoding practices
  - ISO/IEC 26139:2024 — Information technology — OpenID connect — OAuth 2.0 form post response mode

Exciting time for OpenID Connect!

- More happening than at any time since original specs created
- I'll give you a taste of the exciting work happening…

OpenID Federation Specification

- https://openid.net/specs/openid-federation-1_0.html
- Enables trust establishment and maintenance of multilateral federations
  - Applying lessons learned from large-scale SAML federations
- Renamed from “OpenID Connect Federation” to reflect broader role
  - Can be used with ecosystems of your choice, including OpenID Connect, wallets, etc.
- In production use in Italy, Australia, Sweden
- Certification tests being written
  - https://openid.net/certification/federation_testing/
- Security analysis performed preparing for Final status
- In-person interop event being held in Stockholm at SUNET in April 2025
  - 30 attendees from 15 countries with 14 implementations
- *Plan to take 1.0 to Final status this year*

Vulnerability in JWT Audience for AS (1)

- Found by University of Stuttgart researchers during OpenID Federation security analysis
- Described in public disclosure
  - https://openid.net/notice-of-a-security-vulnerability/
- OpenID Federation fixed
- OpenID Connect Core errata in progress
- FAPI 2.0 fixed
- FAPI 1.0 errata in progress
- CIBA Core errata in progress
- Several OAuth specs being updated by rfc7523bis specification

Vulnerability in JWT Audience for AS (2)

- Fix is requiring that audience value of JWTs sent to the authorization server be ***solely the authorization server issuer identifier***
- Previously, audience values were all over the map, providing ambiguity that attackers could exploit
- For instance, this was the PAR [RFC 9126] audience text:

> Due to historical reasons, there is potential ambiguity regarding the appropriate audience value to use when employing JWT client assertion-based authentication (defined in Section 2.2 of [RFC7523] with private_key_jwt or client_secret_jwt authentication method names per Section 9 of [OIDC]). To address that ambiguity, the issuer identifier URL of the authorization server according to [RFC8414] **SHOULD** be used as the value of the audience. In order to facilitate interoperability, the authorization server **MUST** accept its issuer identifier, token endpoint URL, or pushed authorization request endpoint URL as values that identify it as an intended audience.

OpenID Federation Extended Subordinate Listing

- https://openid.net/specs/openid-federation-extended-listing-1_0.html
- Extends OpenID Federation to provide efficient methods to interact with potentially large number of participating Entities
- Motivated by open finance use cases in Australia, etc.

- ***Implementations and feedback wanted!***

OpenID Federation Wallet Architectures

- https://openid.net/specs/openid-federation-wallet-1_0.html
- Defines entity types for trust establishment for wallet ecosystems with OpenID Federation
  - `openid_wallet_provider`
  - `openid_credential_issuer`
  - `openid_credential_verifier`

- ***Implementations and feedback wanted!***

OpenID Connect Relying Party Metadata Choices

- https://openid.net/specs/openid-connect-rp-metadata-choices-1_0.html
- Lets RPs declare all supported metadata parameters to OPs
  - In existing OpenID Connect Dynamic Client Registration spec, only one value expressed for each choice
- Used by OpenID Federation
- First Implementer's Draft approved in July 2025
- Updated since to use `token_endpoint_auth_methods_supported` for all Authorization Server endpoints

Native Single-Sign-On for Mobile Apps

- OpenID Connect Native SSO for Mobile Apps specification
  - https://openid.net/specs/openid-connect-native-sso-1_0.html
- Enables Single Sign-On across apps by the same vendor
- Assigns a device secret issued by the Authorization Server
- Deployed by AOL
- *Second Implementer's Draft approved October 2025*
- Updates being considered to replace reuse of ID Token

OpenID Connect Claims Aggregation

- https://openid.net/specs/openid-connect-claims-aggregation-1_0.html
- Enables RPs to request and Claims Providers to return aggregated claims through OPs
- Functional overlap with OpenID4VC specs removed in May

- Reviews wanted

OpenID Provider Commands

- https://openid.net/specs/openid-provider-commands-1_0.html
- Complements OpenID Connect by introducing set of Commands for OP to manage end-user Account at RP
- *Adopted by working group in March 2025*

OpenID Connect Enterprise Extensions

- https://openid.net/specs/openid-connect-enterprise-extensions-1_0.html
- Specifies common or desirable extensions to OpenID Connect
- *Adopted by working group in June 2025*

OpenID Connect Ephemeral Subject Identifier

- https://openid.net/specs/openid-connect-ephemeral-subject-identifier-1_0.html
- Specifies an ephemeral subject identifier type that prevents correlation of the subject identifier across multiple visits
- *Adopted by working group in June 2025*
- Reviews requested

OpenID Connect Key Binding

- https://github.com/openid/connect-key-binding
- Specifies how to bind public key to OpenID Connect ID Token
- *Adopted by working group in October 2025*
- Publication to openid.net/specs/ expected this week

Related OpenID Working Groups

- **M**obile **O**perator **D**iscovery, **R**egistration, & authe**N**tic**A**tion (MODRNA)
  - Mobile operator profiles for OpenID Connect
- Financial-grade API (FAPI)
  - FAPI used for Open Finance in jurisdictions including UK, Australia, Brazil, Saudia Arabia, Norway, Germany, Japan, Canada, & more to come…
- eKYC and Identity Assurance (eKYC-IDA)
  - Defines JWT format for verified claims with identity assurance information
- Digital Credentials Protocols (DCP)
  - Future home of OpenID for Verifiable Credentials (OpenID4VC) specs

OpenID for Verifiable Credentials *(Related Work Transferred to DCP WG)*

- Family of specs enabling use of identities that you hold
- Uses the three-party Issuer/Holder/Verifier model
  - An Issuer creates a Verifiable Credential for you to hold
  - You hold it in a Wallet
  - You present it to a Verifier, possibly redacting some claims
- Credential format agnostic
  - Can be used w/ W3C VCs, ISO Mobile Driving Licenses (mDL), SD-JWTs, etc.
- Good privacy properties
  - Issuer doesn't know when/where you're using the credential
- See https://openid.net/openid4vc/

Identity Assurance Specification *(Related Work in eKYC-IDA WG)*

- OpenID Connect for Identity Assurance
  - https://openid.net/specs/openid-connect-4-identity-assurance-1_0.html
- JWT representation for verified person data
  - Including information about the identity verification performed
  - Enables legal compliance for some use cases
- Moved to eKYC and Identity Assurance working group in 2019

- *Became Final in October 2024*

CIBA Core
(Related Work in MODRNA WG)

- OpenID Connect Client-Initiated Backchannel Authentication (CIBA) Core
  - https://openid.net/specs/openid-client-initiated-backchannel-authentication-core-1_0.html
- Authentication flow with direct Relying Party to OpenID Provider communication without redirects through browser
- Used by FAPI CIBA Profile
- Errata 1 draft published with security fix

- *Became Final in September 2021*

What is OpenID Certification?

- Enables OpenID Connect (and FAPI) implementations to be certified as meeting the requirements of defined conformance profiles
  - Goal is to make high-quality, secure, interoperable implementations the norm
- An OpenID Certification has two components:
  - Technical evidence of conformance resulting from testing
  - Legal statement of conformance
- Certified implementations can use the "OpenID Certified" logo
- *4,357 total certifications to date!*

What value does certification provide?

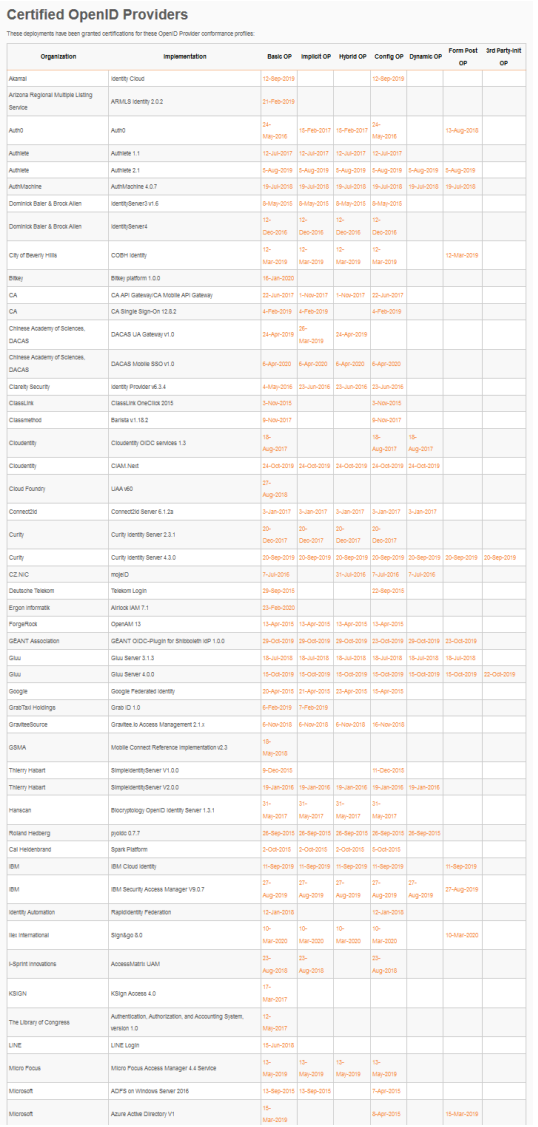
- Technical
  - Certification testing gives confidence that things will “just work”
  - No custom code required to integrate with implementation
  - Better for all parties
  - Relying parties explicitly asking identity providers to get certified
- Business
  - Enhances reputation of organization and implementation
  - Shows that organization is taking interop seriously
  - Customers may choose certified implementations over others

OpenID Connect Certification Profiles

- Authentication
  - Basic Flow
  - Implicit Flows
  - Hybrid Flows
  - Third Party-Initiated Login Flow
- Discovery (OP Metadata)
- Dynamic Client Registration (RP Metadata)
- Form Post Response Mode
- Logout
  - RP-Initiated Logout
  - Session Management
  - Front-Channel Logout
  - Back-Channel Logout

OpenID Connect OP Certifications

- OpenID Provider certifications at https://openid.net/certification/#OPs
  - 666 profiles certified to date for 187 deployments
- Recent certifications
  - Authcube, Authelina, Banco de Credito del Peru, Hopae, Luiky Vasconcelos, Nevis Security AG, Skillmine Technology Consulting, Yaal Coop
- Each entry link to zip file with test logs and signed legal statement
  - *Test results available for public inspection*



Certified OpenID Providers

These deployments have been granted certifications for these OpenID Provider conformance profiles:

Organization	Implementation	Basic OP	Implicit OP	Hybrid OP	Config OP	Dynamic OP	Form Post OP	3rd Party-init OP
Akamai	Identity Cloud	12-Sep-2019			12-Sep-2019			
Arizona Regional Multiple Listing Service	ARMLS Identity 2.0.2	21-Feb-2019						
Auth0	Auth0	24-May-2016	15-Feb-2017	15-Feb-2017	24-May-2016		13-Aug-2018

Certified OpenID Relying Parties for Logout Profiles

These deployments have been granted certifications for these OpenID Relying Party logout conformance profiles:

Organization	Implementation	RP-Initiated RP	Session RP	Front-Channel RP	Back-Channel RP
Roland Hedberg	OIDCrp v.0.6.6	20-Mar-2020	20-Mar-2020	20-Mar-2020	20-Mar-2020

Use of Self-Certification

- OpenID Certification uses self-certification
  - Party seeking certification does the testing
  - (rather than paying a 3rd party to do the testing)
- Simpler, quicker, less expensive, more scalable than 3rd party certification
- Results are nonetheless trustworthy because
  - Testing logs are made available for public scrutiny
  - Organization puts its reputation on the line by making a public declaration that its implementation conforms to the profile being certified to

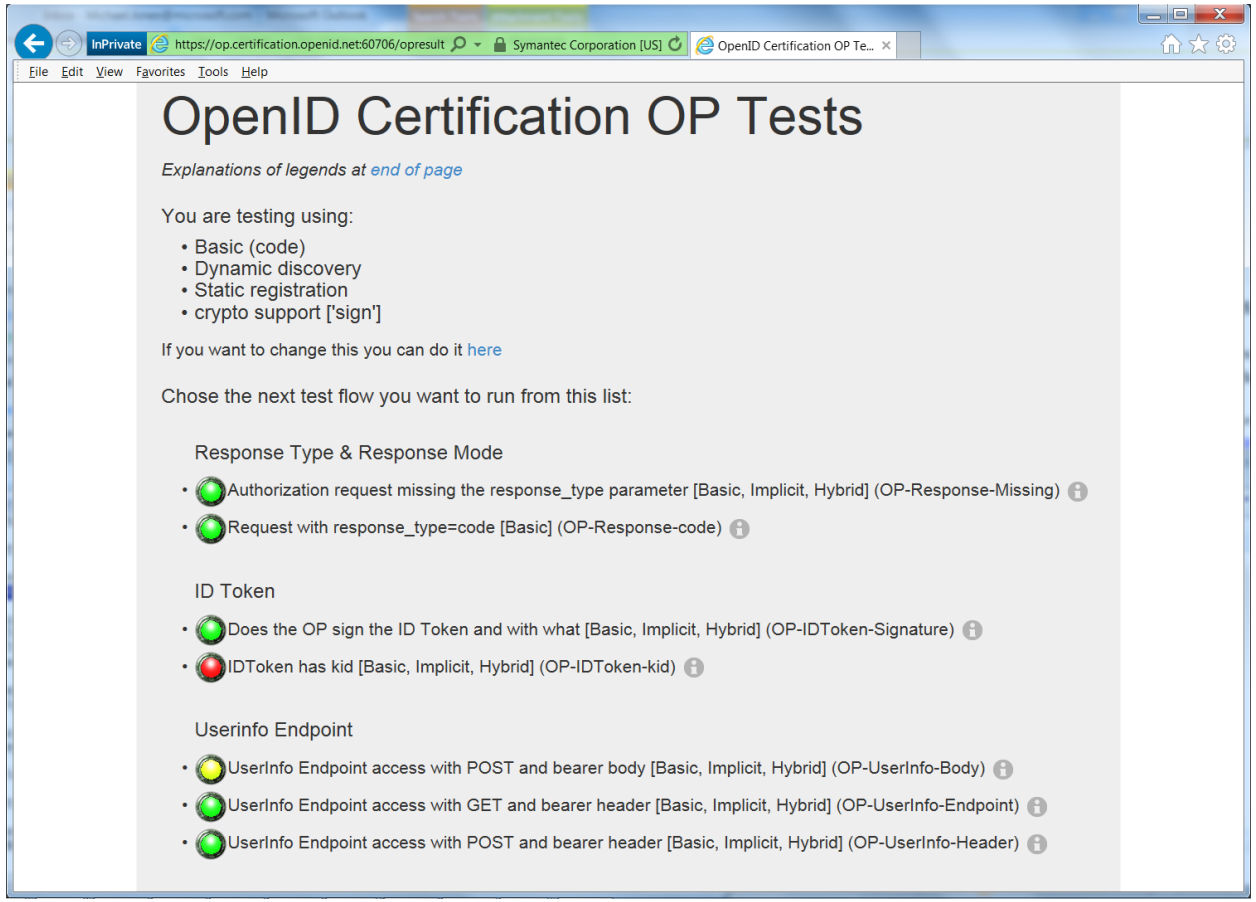
How does OpenID Certification work?

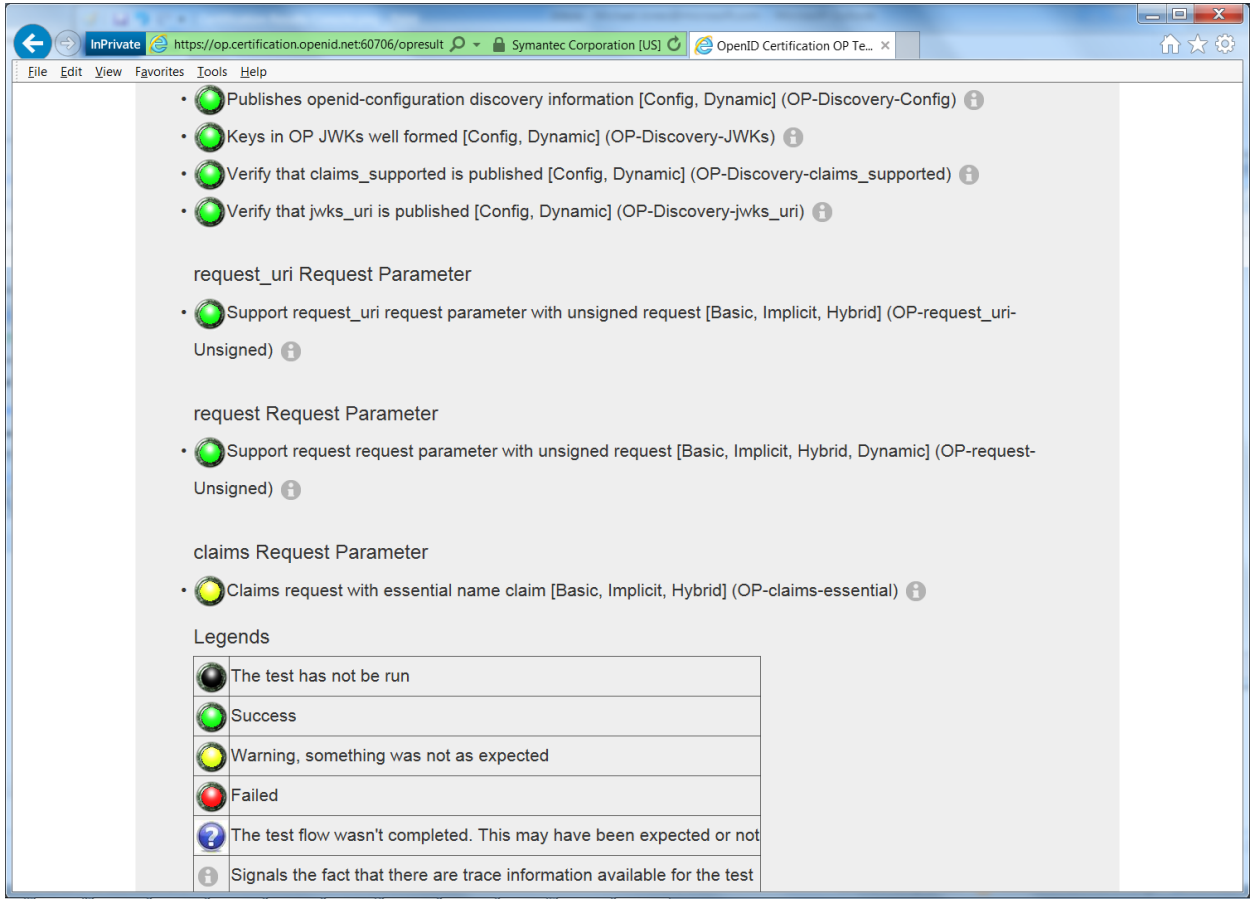
- Organization decides what profiles it wants to certify to
  - For instance, “Basic OP”, “Config OP”, and “Dynamic OP”
- Runs conformance tests publicly available at https://www.certification.openid.net/
- Once all tests for a profile pass, organization submits certification request to OpenID Foundation containing:
  - Logs from all tests for the profile
  - Signed legal declaration that implementation conforms to the profile
- Organization pays certification fee (for profiles not in pilot mode)
- OpenID Foundation verifies application is complete and grants certification
- OIDF lists certification at https://openid.net/certification/

What does certification cost?

- Not a profit center for the OpenID Foundation
  - Fees there to help cover costs of operating certification program
- Member price
  - $700
- Non-member price
  - $3500
- New profiles in pilot mode are available to members for free
- Costs described at https://openid.net/certification/fees/

Example Testing Screen





Log from a Conformance Test

Test info

Profile: {'openid-configuration': 'config', 'response_type': 'code', 'crypto': 'sign', 'registration': 'static'}
Timestamp: 2015-04-07T02:58:53Z
Test description: Keys in OP JWKs well formed [Config, Dynamic]
Test ID: OP-Discovery-JWKs
Issuer: https://stsadweb.one.microsoft.com/adfs

Test output

```
__After completing the test flow:__
[verify-base64url]
        status: OK
        description: Verifies that the base64 encoded parts of a JWK is in fact base64url encoded and not just base64 encoded
[check-http-response]
        status: OK
        description: Checks that the HTTP response status is within the 200 or 300 range
__X:==== END ====__
```

PASSED

Certification of Conformance

- Legal statement by certifier stating:
  - Who is certifying
  - What software
  - When tested
  - Profile tested
- Commits reputation of certifying organization to validity of results

OpenID

CERTIFICATION OF CONFORMANCE
TO OPENID CONNECT CONFORMANCE PROFILE

Name of Entity ("Implementer") Making this Certification: Ping Identity Corporation

Software or Service ("Deployment") Name & Version #: PingFederate Summer 2015 Release

OpenID Connect Conformance Profile: Basic OpenID Provider

Conformance Test Suite Software: op.certification.openid.net as of April 10, 2015

Test Date: April 10, 2015

1. Certification: Implementer has tested the Deployment (including by successfully completing the validation testing using the Conformance Test Suite Software) and verified that it conforms to the OpenID Connect Conformance Profile, and hereby certifies to the OpenID Foundation and the public that the Deployment conforms to the OpenID Connect Conformance Profile as set forth above.
2. Maintenance: If subsequent changes to the Deployment, or other information or testing, indicates that the Deployment is not in conformance, Implementer will either correct the nonconformance (and update this Certification if necessary) or revoke this Certification.
3. Incorporation of Terms: The Terms and Conditions for Certification of Conformance to an OpenID Connect Conformance Profile, located at www.openid.net/certification, are incorporated by reference in this Certification, and Implementer agrees to be bound by such Terms and Conditions.

Implementer's Address Information	
Address:	1001 17th Street,Suite 100
City, State/Province, Postal Code	Denver, CO 80202
Country	USA
Implementer's Authorized Contact Information	
Name:	Brian Campbell
Title:	Distinguished Engineer
Phone:	720.317.2061
Email:	bcampbell@pingidentity.com

Authorized Signature:

Name: David Wasserman

Title: Assoc. Gen. Counsel

Date: Apr. 10, 2015

How does certification relate to interop testing?

- OpenID Connect held 5 rounds of interop testing – see http://osis.idcommons.net/
  - Starting over a decade ago!
  - Each round improved implementations and specs
  - By the numbers: 20 implementations, 195 members of interop list, > 1000 messages exchanged
- Multiple interop testing rounds for OpenID Federation
  - Next will be in Stockholm hosted by SUNET at the end of this month
- With interop testing, by design, participants can ignore parts of the specs
- Certification raises the bar:
  - Defines set of conformance profiles that certified implementations meet
  - Assures interop across full feature sets in profiles

Can I use the OpenID Certification site for interop testing?

- Yes – please do!
- The OpenID Foundation is committed to keeping the conformance test sites up and available for free to all
- Many projects using conformance testing for regression testing
  - Once everything passes, you're ready for certification!
- Test software is open source using Apache 2.0 license
  - Some projects have deployed private instances for internal testing
  - Available as a Docker container

Favorite Comments on OpenID Certification

- Eve Maler – VP of Innovation at ForgeRock
  - "You made it as simple as possible so every interaction added value."
- Jaromír Talíř – CZ.NIC
  - "We used and still are using certification platform mainly as testing tool for our IdP. Thanks to this tool, we have fixed enormous number of bugs in our platform an even some bugs in the underlying library."
- Brian Campbell – Distinguished Engineer at Ping Identity
  - "The process has allowed us to tighten up our implementation and improve on the already solid interoperability of our offerings in the OpenID Connect ecosystem."
- William Denniss – Google
  - "We have built the RP tests into the continuous-integration testing pipeline for AppAuth."

What's new for OpenID Certification?

- Certification program is now financially self-supporting!
  - Open Banking certifications from Brazil and other places got us there
- OpenID4VC certification tests started
- eKYC-IDA certification tests started
- Shared Signals certification tests started
- OpenID Federation certification tests started

OpenID Certification Call to Action

- Test your OpenID Connect, FAPI, OpenID4VC, OpenID Federation, and Shared Signals implementations now
  - And once you're ready, certify!
- Join the OpenID Foundation and/or the OpenID Connect working group
